Referral to Outside Laboratories, Facilities, and/or Providers

The purpose of this form is to ensure that your testing is performed at a laboratory or facility that participates with your insurance provider.

I acknowledge that in the course of my treatment, RMA of NJ may refer me to other health care facilities and/or providers for diagnostic tests, procedures or consultations. RMA of NJ agrees to notify me when such a referral is required. I understand that RMA of NJ does not know whether the facility or provider to which I am being referred is a participating provider of my insurance plan.

I agree that should RMA of NJ make such a referral, **it is my responsibility to verify my insurance coverage, eligibility, precertification (if applicable) , and whether or not the outside facility or provider that RMA of NJ refers to contracts with my health insurance plan.** RMA of NJ is not responsible should my health insurance plan process claims at the non-contracted level for the referred services(s). I agree to be financially responsible for either the full amount or the balance after payment by my health insurance plan should the claim be denied or processed at a lesser benefit level.

RMA of NJ commonly refers to the following outside laboratories; Quest Diagnostics, Lab Corp, Counsyl, Sema4, and Bioreference. Please note that Lab Corp is the preferred lab for all Blue Cross and Oxford Health Plans. Both Lab Corp and Quest are listed as preferred labs for Aetna and United Healthcare plans. If my insurance requires a lab other than those listed above, I understand that I will need to obtain a script from RMA of NJ and have my blood drawn at the designated facility required by my insurance carrier.

RMA of NJ commonly refers to outside radiology facilities including, but not limited to; Berger, Hirsch & Ratakonda Radiologists, University Radiology, New Century Imaging, Larchmont Imaging, Atlantic Medical Imaging, Diagnostic Radiology and Ultrasound, Freehold Radiology, Princeton Radiology and Radiology at Lehigh Valley Hospital.

Sema4 and Counsyl are specialty laboratories that RMA of NJ recommends for genetic testing such as Cystic Fibrosis, Ashkenazi Jewish Panels, Thalassemias, SMA testing and for further evaluation for male factor infertility. Some of this complex testing is only performed at these labs, so please call your insurance company for further information about your coverage.
